

The BIG Shim™ is the follow-up to the original Shim.

Designed with a stronger cover than the original, the BIG Shim™ can generate the same predictable motion and control as the original, but on a heavier volume of oil. This addition to the product line will help tame flatter patterns when they are fresh, while still offering a smooth transition as they begin to break down and open up. The predictability and performance on a wide range of patterns will easily set this ball apart as a true controlled Benchmark on a wide range of conditions. A welcome addition to the BIG Family.
